

Your guide to Office Attendance

Track your office days and office hours against the 50% target, from your phone, in a few taps a day.

- **Free, with no account to create.** Open the link, answer five questions, and you're going.
- **Your data stays on your phone**, with an encrypted cloud backup that only you can unlock.
- **Works like an app** once it's on your home screen, even with no signal.
- **Shows where you stand** for both rules: office days *and* office hours, ahead (+) or short (–).

12 Questions and fixes

1 Get set up

It takes about five minutes, and there's no sign-up. The first time you open the site, a short setup screen appears.

1

Open the link on your phone

Scan the QR code on the front page, or type **officeattendance.kaio.be.workers.dev**. On an iPhone use **Safari**; on Android use **Chrome**. That matters for step 2.

2

Answer the setup questions

- **Public holidays:** your state or territory. It's guessed from your phone's time zone; Canberra shares Sydney's, so ACT staff pick ACT.
- **Day off each week:** leave as *None (5-day week)*, or pick the weekday you don't work if you're part-time.
- **Standard day:** your contracted hours per day. It starts at **8.75**.
- **Office target:** **50%**.
- **Usual hours:** your normal start and finish, **09:00 to 17:45** to begin with. *Standard day* fills these in for you later.
- **Back up to the cloud automatically:** leave this ticked (see step 3).

Tap **Start**. Everything here can be changed later in Settings.

Office Attendance

Track your office days and hours across the October to September year. Your data lives on this phone, with no account. Cloud backup keeps an encrypted copy that only your recovery code can open.

Public holidays	Victoria
Day off each week	None (5-day we...)
Standard day	8.75 h
Office target	50 %
Usual hours	09:00 - 17:45

☒ **Back up to the cloud automatically**

Encrypted on this phone before it's sent. You'll get a recovery code to restore it on any phone.

You can change any of these later in Settings.

Start

Restore a backup...

Add it to your home screen so it opens like an app and keeps your data safe: on iPhone, Share > **Add to Home Screen**; on Android, the menu > **Install app**.

The setup screen

3

Save your recovery code

Next you'll see your **recovery code**: 16 letters and numbers in four groups, as in the picture (yours will be different). It unlocks your cloud backup, which is how you get your history back on a new phone.

- Tap **Copy** or **Share...** and keep it in your password manager, Notes, or an email to yourself.
- Then tap **I've saved it**.

Nobody can recover a lost code.

Your backup is encrypted with it on your phone before it's sent, so not even the site's owner can open it. You can see the code again any time in Settings > Backup > Show code.

4

Optional: save a passkey too

Tap **Save a passkey...** and confirm with Face ID or your fingerprint. Your next phone can then restore your data with Face ID, with nothing to type. Passkeys sync through iCloud Keychain (iPhone) or Google Password Manager (Android), so keep the code as well in case you switch between the two.

Your recovery code

Save this somewhere safe: a password manager, Notes, or an email to yourself. It's the only way to restore your backup on another phone. Your data is encrypted with it, so nobody else can recover it for you.

GF2C-1YHD-MJ2E-Y5ZB

Copy

I've saved it

Save a passkey as well, and your next phone restores with Face ID or a fingerprint. Keep the code too: it's the way back if you switch between iPhone and Android.

Passkey saved. Restore with it on your next phone.

Your recovery code, with the passkey option below

2 Put it on your home screen

Do this straight after setup. It gives you an app icon, opens full screen without the browser bars, and works offline.

Why it matters on an iPhone

Safari can clear a website's stored data if you don't visit it for a few weeks. Anything on your home screen is kept. With cloud backup on you wouldn't lose your history anyway, but this avoids having to restore.

iPhone (Safari)

- 1 With the site open in **Safari**, tap the **Share** button (the square with an arrow pointing up) at the bottom of the screen.
- 2 Scroll down the list and tap **Add to Home Screen**.
- 3 Leave the name as *Attendance* and tap **Add**.
- 4 Close Safari and open **Attendance** from its new icon from now on.

Using Chrome on an iPhone? Tap the Share icon in the address bar, then Add to Home Screen.

Android (Chrome)

- 1 With the site open in **Chrome**, tap the **⋮** menu at the top right.
- 2 Tap **Install app** (on some phones it says **Add to Home screen**).
- 3 Tap **Install** to confirm.
- 4 Open **Attendance** from your home screen or app drawer from now on.

Chrome may also offer "Install" in a banner by itself. Tapping that does the same.

A handy shortcut (Android)

Press and hold the Attendance icon and choose **In now**. It opens the app on today and records your start time in one go. If you already have an In time for today, it asks before changing it. iPhones don't offer shortcuts for home-screen web apps, so on an iPhone just open the app and tap **In now**.

Updates arrive by themselves

When there's a new version, the small version badge at the top turns yellow (for example *v1.17.3* → *v1.18.0*). Tap it to update. You can also use **Settings** > **Check for updates**. Updating never touches your data.

3 Log your day

The app opens on **Today**. Everything saves the moment you tap. There's no Save button.

Clock in and out with one button

1. Arrive: tap **In now**

2. It records the time and marks the day
Office

3. Leave: tap **Out now**

- The big button always does the next thing: **In now** until you have a start time, then **Out now**. It shows the current time.
- Punching in marks the day as an **Office** day automatically.
- A green line confirms what was saved, with **Undo** if you tapped by mistake.
- While you're in, the hours count up under the buttons ("8 h 49 m so far"). Once you're out, you'll see the day's total.

Or type the times

Tap the **In** or **Out** box and type a time any way you like: **930**, **9:30**, **1745** or **5:45pm** all work. It's tidied to 24-hour time (09:30, 17:45) when you leave the box.

- **Standard day** fills in your usual hours (09:00–17:45 unless you've changed them).
- **Clear times** removes both times but keeps the day's code.
- Typing a time on a blank day saves it as an Office day.

Mark what kind of day it was

Below the times are the **codes**. Tap one to set the day. Tap a different one to change it. Only Office and Home days count towards the target.

CODE		USE IT FOR
O	Office	Working in the office. Your times count as office hours.
H	Home	Working from home.
WS	Working sick	Worked while unwell. Counts as a day worked, but not towards the target.
L	Annual leave	Leave of each kind. Leave days come out of the calculation altogether, so they never count against you.
LOY	Loyalty leave	
PL	Parental leave	
LSL	Long service	
S	Sick leave	
PH	Public holiday	Filled in for you for your state, with the holiday's name in the note.
NW	Non-working day	Your regular day off if you work part-time. Filled in for you.
W	Weekend	Filled in for you. Weekends can't be changed.

- **× Clear day** (in red, below the codes) removes everything for that day.
- **Comment** is a free-text note for the day: "client visit", "train delays".

Other days

- Use the ‹ and › arrows beside the date to step a day at a time, or tap the date itself to pick any day.
- **Today** appears under the date when you're looking at another day. Tap it to jump back.
- Forgot yesterday? Step back, tap **Office**, and type the times.

The screenshot shows the 'Attendance' app interface for the financial year 'FY27'. At the top, there are buttons for 'Standard day' and 'Clear times'. Below this, the 'WORK' section includes 'Office' (selected), 'Home', and 'Working sick'. The 'LEAVE' section includes 'Annual leave', 'Loyalty leave', 'Parental leave', 'Long service', and 'Sick leave'. The 'NOT A WORK DAY' section includes 'Public holiday', 'Non-working day', and 'Weekend'. Below these is a red '× Clear day' button and a 'COMMENT' text box. At the bottom, a summary for 'November so far' (to Wed 18 Nov) shows 'DAYS' at 66.7% (+2 d) and 'HOURS' at +12.29 h. It also shows a progress bar for '8 of 12 days · target 6' and '60.42 of 48.13 h' (50% x 11 work days x). Navigation icons for 'Today', 'Month', and 'Year' are at the very bottom.

The codes, Clear day and the comment box

4 See where you stand

Scroll down on Today to see how this month is going so far.

There are two rules, and the card shows both.

Days

The big number is the **share of your work days spent in the office**, e.g. **66.7%**. Beside it, **+2 d** means two office days more than the target needs; a red **-1 d** would mean one short. The line under it reads "8 of 12 days · target 6".

Hours

The big number is how many **office hours you're ahead (+) or short (-)** of the target so far, e.g. **+12.29 h**. Under it: the hours you've done against the hours needed (60.42 of 48.13 h), and how the target was worked out (50% × 11 work days × 8.75 h).

Reading the colours

- **Green +** means ahead of the target. **Red -** means short.
- A percentage under 50% is shown in **red**.
- The bar fills towards the target, which is the small mark on it.

Today counts once you've clocked out

So being at work doesn't make you look behind during the day.

"November so far" on the Today tab

5 The Month tab: review and plan ahead

One month as a calendar, Monday first.

- Each day shows its code in its colour. Weekends show **W**.
- A **dot** in the corner means times are logged.
- Days still to come are **faded**: anything you've entered there is your plan.
- **Swipe sideways** or use the arrows to change month.
- **Tap a day** to open it on Today and edit it.

Planning ahead

Map out the weeks ahead (which days you'll be in, and any leave) and the Month cards tell you where the month will land if the plan holds.

They're tagged **incl. planned**.

- A planned Office day with no times counts as a standard day (8.75 h) until you log the real times.
- The note under the hours shows the planned hours, and **so far**, which is where you stand today.

Under the calendar are the same **Days** and **Hours** cards as on Today, for the whole month.

November, with planned days faded and the month's totals underneath

Fill several days at once

Booking a week of leave, or planning your office days for the month:

- 1 Tap **Select** at the top of the calendar.
- 2 Tap the **first day**, then the **last day**.
- 3 Tap a code in the panel that slides up, e.g. **Office** or **Annual leave**.

Only your work days change. Weekends, public holidays and your day off in the range are left alone (they're hatched), so leave never inflates your counts. **Clear these days** empties the range; **Cancel** backs out.

6 The Year tab

The whole financial year (October to September) at a glance.

The cards at the top

Choose the period with the buttons across the top:

BUTTON	SHOWS
MTD	Month to date: this month up to today
Month	This whole month, including what you've planned
YTD	Year to date: the financial year up to today
Year	The whole financial year, including what you've planned

Below **Office days** and **Office hours** there's **Average day length**: how long your completed office days have been on average, against your standard day. It's for interest only and doesn't affect the target.

The Year tab's cards

One row per month

COLUMN	MEANS
Days %	Office days as a share of work days
Days +/-	Office days ahead (+) or short (-) of the target
Hours %	Office hours as a share of available hours
Hours +/-	Office hours ahead (+) or short (-) of the target

Planned days are included. A percentage under 50% is in red. An **amber dot** means some office days so far have no times yet, so the hours may be low only because they're missing.

Tap a month to open it in the Month tab. To see another financial year, use the **FY** picker at the top of the screen.

Each month stands on its own

The target applies to each month. A surplus one month doesn't make up for a shortfall in another, so the year's totals are an overview only.

Attendance

FY27

Office share and against the 50% target, for days then hours, incl. planned. Red is below 50%.

MONTH	DAYS %	DAYS +/-	HOURS %	HOURS +/-
Oct 26	65.0%	+3	65.1%	+26.42
Nov 26	66.7%	+3	66.1%	+25.42
Dec 26	—	—	—	—
Jan 27	—	—	—	—
Feb 27	—	—	—	—
Mar 27	—	—	—	—
Apr 27	—	—	—	—

Jun 27	—	—	—	—
Jul 27	—	—	—	—
Aug 27	—	—	—	—
Sep 27	—	—	—	—
FY27	65.8%	+6	65.6%	+51.83

Total days worked 38 O + H + WS

Total work days 42 incl. leave

Today

Month

Year

FY27 by month

7 How the target is worked out

Each month has to meet **both** rules: at least half your work days in the office, **and** at least half your available hours in the office.

Which days count

- **Work days** are the days coded **Office** or **Home**. Only these count.
- Leave, public holidays, weekends, your day off and working sick are left out entirely, so they can't drag your percentage down.
- **Office hours** are the time between In and Out on Office days.

The formulas

```
Days %           = Office days ÷ Work days
Days needed      = Work days × 50%
Hours available   = Work days × standard day (8.75 h)
Hours needed      = Hours available × 50%
Hours %          = Office hours ÷ Hours available
```

An example

A month with **20 work days** on an 8.75-hour standard day needs **10 office days** and **87.5 office hours** ($20 \times 8.75 \times 50\%$).

- Ten office days of 9 hours each: 10 days ✓ and 90 hours ✓. You'd see **0 d** and **+2.50 h**.
- Ten office days of 7 hours each meets the days rule but leaves you **-17.50 h** short on hours.

Fill in every work day

Only days marked Office or Home count, so a month is only complete once each work day has a code. If you mark Home days too, your percentage reflects your real split.

Good to know

- A past Office day with no times counts as zero hours. It's flagged with an amber dot so you can fill it in.
- A future (planned) Office day with no times counts as a standard day, as an estimate.
- Your standard day and target come from Settings. If yours differ, change them there and every figure updates.

8 Settings

On a phone, tap the ... menu at the top right, then **Settings**. On a computer, click **Settings** at the top. Changes save as you make them.

Working pattern

- **Standard day:** your daily contracted hours. This drives the hours target.
- **Office requirement:** the target percentage (50%).
- **Non-working day:** your regular day off if you're part-time. Changing it moves your NW days from today on.
- **Public holidays:** your state or territory. Changing it moves the holidays from today on. Past days and anything you've logged stay as they were.
- **Standard hours:** the times the *Standard day* button fills in.

Appearance

Match device, **Light** or **Dark**. The menu has a quick theme switch too.

Years and calendar

- **Add FY...** opens next financial year early, if you want to plan that far ahead. It asks first.
- **Refill weekends and holidays** puts back any calendar days you cleared.
- **Clear future days** wipes everything from tomorrow to the end of the year, for starting a plan again. It asks first.

The screenshot shows the 'Settings' app interface. At the top, there's a 'Settings' title and a 'Close' button. The first section is 'WORKING PATTERN' with a subtitle 'Saved as you change it'. It contains five settings: 'Standard day' (8.75 h), 'Office requirement' (50 %), 'Non-working day' (None (5-day we...)), 'Public holidays' (Victoria), and 'Standard hours' (09:00 - 17:45). The second section is 'APPEARANCE' with three options: 'Match device', 'Light', and 'Dark'. The third section is 'YEARS AND CALENDAR' with three items: 'Add FY29' (Lays out Oct 2028 - Sep 2029), 'Refill weekends and holidays' (Fills blank days in this year with weekends, public holidays and non-working days), and 'Clear future days' (Tomorrow to 30 Sep 2027 · asks first). The fourth section is 'BACKUP'.

Settings: working pattern, appearance, years

Backup

- The green line shows that **cloud backup is on** and when it last backed up.
- **Show code** shows your recovery code again.
- **Add passkey** saves a passkey, if you didn't at setup. Each passkey is listed with **Remove**.
- **Restore...** brings in a backup with your code or a passkey, replacing what's on this phone.
- **Turn off** stops cloud backup and deletes the cloud copy.
- **Export CSV** downloads the year as a spreadsheet file.
- **Save file** and **Open file...** save and restore a backup file yourself, as an extra copy.

At the bottom

The version you're running, and **Check for updates**.

Settings: backup

9 Backups and moving to a new phone

How cloud backup works

- A few seconds after every change, your phone sends an **encrypted** copy of your data to the cloud. It also backs up when you switch away from the app.
- With no signal it waits, says so in Settings, and sends as soon as you're back online.
- Your recovery code is the key. It never leaves your phone, so nobody else (including whoever runs the site) can read your backup.

New phone, or a reset phone

- 1 Open the link on the new phone. The setup screen appears.
- 2 Tap **Restore a backup...**
- 3 Tap **Use a passkey** and confirm with Face ID or your fingerprint, or type your recovery code and tap **Restore**. Spaces, dashes and capitals don't matter.
- 4 Everything comes back: days, times, notes and settings. The new phone carries on backing up to the same code. Then add it to your home screen (section 2).

Have a backup file instead? Tap **Use a backup file instead** and pick it.

It's a backup, not live sync

Use one phone day to day. If two devices both back up to the same code, the second one won't overwrite the other's copy. Instead, Settings asks you to choose **Use the cloud copy** or **Keep this phone's**.

10 Using it on a computer

The same link works in any desktop browser, with a bigger layout: the day editor, the cards, and a grid of the whole year.

The year grid on a computer. The day editor and cards sit above it, as on the phone.

The year grid

- One row per month, one cell per day, with each month's totals at the right: **Work**, **Office** and **%** for days, and **Office**, **H%** and **Gap** for hours.
- **Click** a day to edit it in the panel above.
- **Shift-click** a second day to select a range, then click a code.
- **Ctrl-click** (⌘-click on a Mac) picks any days you like.
- **All hour columns** adds the extra workings (available hours, hours required, average day, and how many days have times).

Keyboard shortcuts

← →	Previous / next day
↑ ↓	Same day last / next week
Shift + ← →	Extend the selection a day
Shift + ↓ / ↑	Select to Friday / back to Monday

The cards above the grid switch between **Year to date**, **Full year**, **Month to date** and **Month**.

Your computer keeps its own copy

Data lives in the browser you use it in, so your computer won't show your phone's days by itself. To move your data across, use **Restore...** with your code. Keep using one device day to day, as section 9 explains.

11 Privacy

What's stored, and where

- Your days, times, notes and settings are kept in **your phone's browser**. There's no account, and the app never asks for your name or email.
- With cloud backup on, an **encrypted** copy is kept in the cloud under a random ID made from your recovery code.
- The encryption happens on your phone. The code and the key never leave it, so the cloud copy can't be read by anyone without your code.

Your choices

- Untick cloud backup at setup, or later use **Settings › Backup › Turn off**, to keep everything on your phone only. Turning it off deletes the cloud copy.
- Backups not touched for three years are removed automatically.
- This is a personal tracking tool, not an official record. Keep using your organisation's own systems for anything formal, like leave requests.

12 Questions and fixes

I lost my recovery code.

If cloud backup is still on, open Settings › Backup › **Show code** on your current phone and save it again. If the phone is gone too, a passkey (if you saved one) can still restore. Otherwise the backup can't be opened.

The app looks out of date.

Tap the yellow version badge if it's showing, or **Settings › Check for updates**. Your data isn't affected.

The hours look too low.

Look for an amber dot: some office days are missing their In or Out time. Open those days and add the times.

Can I log a day I forgot?

Yes. Step back to the day (or tap it in the Month tab), tap **Office**, and type the times.

A public holiday is missing or wrong.

Check **Settings › Public holidays** is your state. A note may appear while Victoria's AFL Grand Final Friday hasn't been announced yet. Mark it **Public holiday** yourself once it is (the note's ✕ hides it).

Does it work with no signal?

Yes, once it's on your home screen. Changes back up as soon as you're online again.

I work part-time.

Set your **Non-working day** in Settings. Those days are filled in as NW and left out of the target.

Weekend work?

Weekends are locked as non-work days and don't count towards the target.
